

## **Plant Chief Power Engineer – Overview**

The Plant Chief Power Engineer will be responsible for establishing a strategic action plan to support the execution of the Plant Foreman's operational goals and objectives. Reporting to the Plant Foreman, this role will be required to also perform the plant chief duties as required by ABSA regulations. You will be responsible for the safe and efficient operation of the Hanlan Robb Gas Plant. You will provide direct coaching, guidance, and support to operating staff and contractors to consistently meet or exceed expectations in the following areas: production; operating costs; policy administration; corporate values; environment, health, safety & training; regulatory; community relations; and emergency response.

The Hanlan Robb Sweet and Sour Gas Plant is located near Edson, Alberta. The sour train at the Hanlan Robb Gas Plant processes include amine sweetening, modified Claus sulfur recovery, Sulfreen tail gas clean-up and Sulfur Prilling. The sweet train at the Hanlan Robb Gas Plant processes include water and hydrocarbon dewpoint control utilizing glycol injection and ammonia refrigeration. The plant receives sweet and sour gas from local area wells.

**Location:** The Hanlan Robb Gas Plant is located at 15-02-049-20W5M, which is approximately 65 km south-west of Edson, Alberta.

This position is a salaried position, 4 days @ 10 hours workweek, and a company truck is provided with personal use.
